

MINI PROJECT OF EXCEL & POWER BI

DATASET DOMAIN	: Healthcare
NO. OF DATASET CHOSEN	: 2
DATASET FORMAT	: .CSV File
DATASET TITLE	: 1.Heart Disease 2.Cardiovascular Disease dataset

PROCESS 1: CHOOSING THE DATASET

[LINK](#)

ABOUT RAW DATASET

[1.Heart Disease](#) - Named as **Raw Data1(H.D)** in the Excel sheet.

- Total number of rows :10001
- Total no. of columns :21
- Column names : Age, Gender, Blood Pressure, Cholesterol Level, Exercise habits, Smoking, Family heart disease, Diabetes, BMI, High blood pressure, Low HDL cholesterol, High LDL cholesterol, Alcohol consumption, Stress level, Sleep hours, Sugar consumption, Triglyceride level, Fasting Blood Sugar, CRP level, Homocysteine Level, Heart disease status.

[2.Cardiovascular Disease datasett](#) -Named as **Raw Data2(Cardia)** in the Excel sheet.

- Total number of rows :70001
- Total no. of columns :13
- Column names : id, age, gender, height, weight, ap_hi, ap_lo, cholesterol,gluc, smoke, Alco, active, cardio.

ABOUT MASTER DATASET

[LINK](#)

The “Heart Disease” and “Cardiovascular Disease datasets” were consolidated into one master dataset named as (**Created Master Dataset**) in an Excel sheet, which served as the primary data source for subsequent analytical tasks.

“Created Master Dataset”

- Total number of rows :3001
- Total no. of columns :22
- Column names :

Patient ID	- Created by own
Age	- Taken from Raw Data1(H.D)
Gender	- Taken from Raw Data2(cardia)
Systolic BP	- Taken from Raw Data2(cardia)
Diastolic BP	- Taken from Raw Data2(cardia)
Cholesterol Level	- Taken from Raw Data1(H.D)
Exercise Habits	- Taken from Raw Data1(H.D)
Smoke	- Taken from Raw Data2(cardia)
Family Heart Disease	- Taken from Raw Data1(H.D)
Fasting Blood Sugar	- Taken from Raw Data1(H.D)
Diabetes	- Taken from Raw Data1(H.D)
Height	- Taken from Raw Data1(H.D)
Weight	- Taken from Raw Data1(H.D)

Triglyceride level - Taken from **Raw Data1(H.D)**
Low HDL Cholesterol - Taken from **Raw Data1(H.D)**
High LDL Cholesterol - Taken from **Raw Data1(H.D)**
Alcohol Consumption - Taken from **Raw Data1(H.D)**
Stress Level - Taken from **Raw Data1(H.D)**
Sugar Consumption - Taken from **Raw Data1(H.D)**
CRP Level - Taken from **Raw Data1(H.D)**
Homocysteine level - Taken from **Raw Data1(H.D)**
Heart Disease Status - Taken from **Raw Data1(H.D)**

ABOUT DERIVED DATASET

[LINK](#)

This master dataset(**Created Raw Data**) was further split into three datasets namely (**Patient Medical Records, Patient habits, Patient details**) with **Patient ID** as the primary key to optimize data modeling and analytics.

Patient Medical Records :

- **Total number of rows** : 3001
- **Total no. of columns** : 14
- **Column names** : Patient ID, Age, gender, Systolic BP, Diastolic BP, Cholesterol Level, Fasting Blood Sugar, Diabetes, Triglyceride level, Low HDL Cholesterol, High LDL Cholesterol, CRP Level, Homocysteine level, Heart Disease Status.

Patient habits :

- **Total number of rows** :3001
- **Total no. of columns** : 9
- **Column names** : Patient ID, Age, gender, Exercise Habit, smoke, Family Heart Disease, Alcohol Gonsumption, Stress level, Sugar Consumption.

Patient details :

- **Total number of rows** :3001
- **Total no. of columns** : 5
- **Column names** : Patient ID, Age, gender, height, weight.
